Absent when pictures were taken

The FHA members work hard for many special projects. This year they earned money for their spring banquet, state and area meetings, and a Micro-wave oven. They plan many activities with the community in mind, such as their monthly meals for the Lions Club.

Carl McCann, FHA Beau.

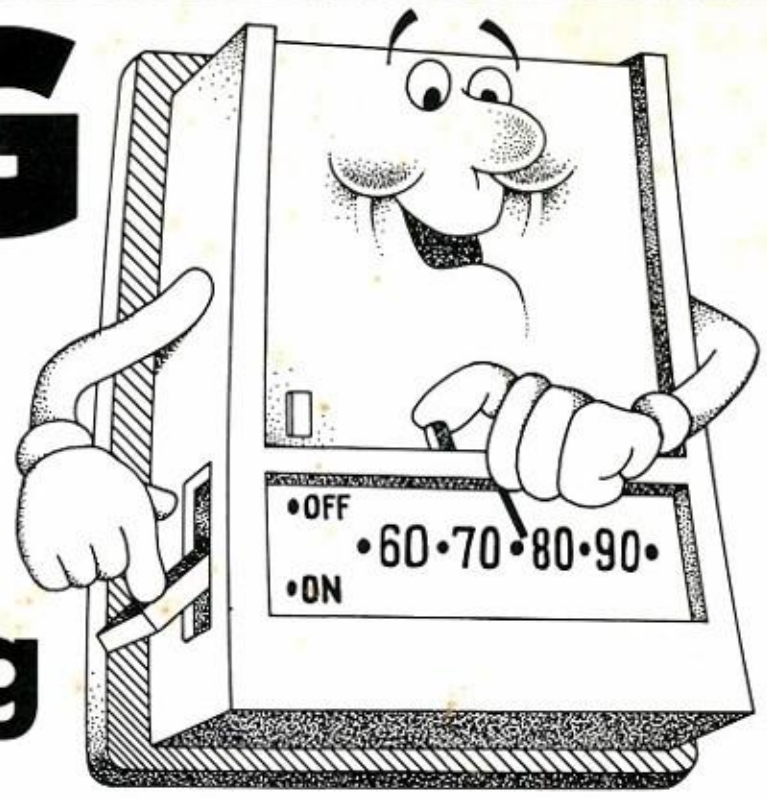
SAVING TIPS on electric air conditioning



Air conditioning provides lots of comfort during the summer months, but for many thousands of homeowners it is also the biggest factor in the cost of electricity. On the average, air conditioning accounts for about half of summertime electric bills.

Here are ways you can hold down the cost of air conditioning and still enjoy its comfort.

Central Systems

1. Set thermostat on 78°, or higher, during the summer. Turn unit off if you'll be away from home several days.
2. Keep equipment at top operating efficiency. Have it checked seasonally by qualified serviceman.
3. Check filter every 30 days. Dirty filters cause equipment to use excessive electricity. If filter is permanent, clean by manufacturer's directions; if it's disposable, it should be replaced when dirty.
4. Keep furniture, draperies away from air outlets and returns. Clean grills often.
5. Close draperies and blinds to keep out direct sunlight.
6. Keep fireplace damper closed.
7. Proper home insulation keeps the heat out, cuts energy use. Insulation questions? Call TP&L.
8. Shade on roof and walls can reduce energy needed to cool. But trim trees, shrubs away from outside compressor unit. Keep it free of leaves, debris. If air flow is blocked, unit uses more energy.
9. Weatherstrip doors and windows; caulk cracks to prevent drafts and cool air loss.
10. Keep windows closed. Open outside doors as little as possible.

Window Units
Follow above suggestions, plus these:

11. Buy units with *highest* "energy efficiency ratio" (EER). Uses less electricity to cool. If EER is not on sales tag, ask for it or figure it yourself. Divide "wattage" into "BTU" capacity. Both figures are on unit.
12. Place unit where it'll get as little direct sun as possible.
13. Aim air outlets at lower half of doorway to next room to allow warm air from that room to enter at the doortop for recooling, recirculation.
14. Never vent air conditioner into garage. Ventilation is usually too poor for top performance of your unit.

Conserve electricity and you help conserve one or more of the fuels needed to produce it. Conserve fuels and you help assure that there will be enough to meet essential needs for electricity in the future.

When you pass a TP&L office, warehouse, generating plant or other facility, you'll see that we've turned off all non-essential lighting. And, in as many other ways as possible, TP&L is reducing its own uses of electricity.

If you would like additional information on conserving electricity, call the Customer Service Representative in the TP&L Office.
